

What is FlingIt?

FlingIt allows its users to instantaneously “fling” a web page from a desktop computer to a Palm OS computer. When used in the classroom setting this will allow students to view a designated web page on their individual Palm. This can be used for a variety of purposes including encyclopedia articles, news web pages, foreign language articles, or any other desired web page.

System Requirements

- Palm Compatible Handheld with OS version 3.0 or higher
- Palm Desktop Software with compatible Macintosh computer (for .prc file installation)
- **WINDOWS:**
 - Internet Explorer 4.0 or higher or
 - Windows 95 / NT 4 or higher
 - 16MB of free RAM recommended
- Files to be included with FlingIt {flingit.prc , SysZLib.prc }

Before using FlingIt

Before you can run FlingIt, it must be installed onto your computer as well as your handheld device. When you run the program called FlingIt installer it will install the appropriate files on your computer. To finish installation you will need to HotSync your handheld to transfer the programs. Once this is done you will be free to run the FlingIt program.

How to use FlingIt

FlingIt 2.0 acts as a dual program that will allow you to (1) download web page content off Internet sites and (2) view this web content on your Palm OS device.
